

Redmine - Patch #17924

Structured Document list for more flexible UI design with CSS

2014-09-22 05:15 - Yonghwan SO

<b>Status:</b>	Closed	<b>Start date:</b>	
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>	Go MAEDA	<b>% Done:</b>	0%
<b>Category:</b>	Documents	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	5.0.0		
<b>Description</b>			
Current version of Document list is built with h4, p, and div for title, updated date and description on same depth with parent h3 in HTML structure.			
<pre>h2. Document h3. Technical documentation h4. My First Document p. updated time div. description h4. My Second Document p. updated time div. description</pre>			
In this structure, page customizing is not easy and list scroll is heavy if there is so many documents. and someone like me want to see more structured view like:			
<pre>h2. Document ` h3. Technical documentation     h4. My First Document       p. updated time     ` div. description   ` h4. My Second Document       p. updated time     ` div. description</pre>			
I Think, sometimes table view is more fit to document list and sometimes current Page-like view with indents is more fit for some project. so using div is more flexible for customizing the view per usage.			
Attached patch includes view patch to add hirerachy for document elements and example css for alternate style is for table like inline view.			
please consider this patch. I will make pull request on github too.

Revision 21403 - 2022-02-08 03:40 - Go MAEDA

Structured Document list for more flexible UI design with CSS (#17924).

Patch by Yonghwan SO and Mizuki ISHIKAWA.

History

#1 - 2014-09-22 05:22 - Yonghwan SO

Oops! I read wiki [Contribute](#) now. I will not make pull request on github. sorry.

#2 - 2021-08-17 02:34 - Mizuki ISHIKAWA

- File 0001-Structure-the-document-list.patch added

- File 0002-Structure-the-document-show-page.patch added

+1  
I'm developing a Redmine theme. Document module pages are difficult to customize.

I will attach a patch with a slightly increased hierarchy in consideration of customizing with the theme. I also added a class for each element.

```
h2. Document
div#document-list
  div.document-group
    h3.group-name Technical documentation
    div.document-item
      h4.title My First Document
      div.updated-on updated time
      div.description Description
    div.document-item
      h4.title My Second Document
      div.updated-on updated time
      div.description Description2
  div.document-group
    div.document-item
      ...
```

I think the document list and how the document display page should be structured.

[0002-Structure-the-document-show-page.patch](#) changes the structure of the document display page as follows:

```
h2.title My First Document
div#document-details
  div.attributes
    div.category-name
    div.created-on
    ul.document-custom-field-values
      li
  div.description
  div.attachments-area
```

### #3 - 2021-08-17 03:31 - Mizuki ISHIKAWA

- File *0001-Structure-the-document-list.patch* added

- File *0002-Structure-the-document-show-page.patch* added

Fix the test code.

[0001](#): This seems a good improvement to me. Maybe you can add some screenshots to show the actual result?

### #5 - 2021-08-17 08:51 - Mizuki ISHIKAWA

Thanks for your feedback.

This patch changes the HTML structure, not the design of the documentation pages.

I think that attaching a screenshot of the screen is not helpful for the review as it is the same view as before the change.

This patch changes the HTML structure, not the design of the documentation pages.

I think that attaching a screenshot of the screen is not helpful for the review as it is the same view as before the change.

My bad, you're right. I got distracted and finally misled by the combination of the words increased hierarchy along with the indentation of the HTML structure examples given in the initial post and in your note. Nevermind me asking about this...

### #7 - 2021-08-17 14:49 - Go MAEDA

- Category changed from UI to Documents
- Target version set to Candidate for next major release

#8 - 2021-08-22 04:31 - Go MAEDA

- Target version changed from Candidate for next major release to 5.0.0

Setting the target version to 5.0.0.

#9 - 2022-01-16 05:25 - Go MAEDA

Thank you for posting the patch. I noticed the following points:

- The CSS class "document-group-\*" that includes the document category name does not work for Unicode characters. For example, if a document category has a name "〇〇〇" (means "uncategorized" in Japanese), the class name will be "document-group-". If all category names are consist of Unicode characters, they will have the same class name "document-group-". How about using group.id instead of group.to\_s.parameterize?
- I think it is better to rename "document-group-\*" to "document-category" (see [source:trunk/config/locales/en.yml#L1316](#))

#10 - 2022-01-26 02:46 - Mizuki ISHIKAWA

- File 0001-Structure-the-document-list.patch added
- File grouping\_options.png added

Updated 0001-Structure-the-document-list.patch.

For example, if a document category has a name "〇〇〇" (means "uncategorized" in Japanese), the class name will be "document-group-". If all category names are consist of Unicode characters, they will have the same class name "document-group-". How about using group.id instead of group.to\_s.parameterize?

Thank you for your feedback.

I tried to use group.id, but when the sort condition is title or date, it returns a String object.

In particular, it was difficult to convert the title group to Unicode, so I decided not to give a unique class name to the group.

Even without class names like **document-group-{}** , I think the clean structure will be enough to make CSS easier to write.

- I think it is better to rename "document-group-\*" to "document-category" (see [source:trunk/config/locales/en.yml#L1316](#))

The document category is one of the grouping options. You can also group by Author, Date, and Title. Therefore, I don't think it is appropriate to change .document-group to .document-category.  
grouping\_options.png

#11 - 2022-02-08 03:40 - Go MAEDA

- Status changed from New to Closed
- Assignee set to Go MAEDA

Committed the patch. Thank you.
