Hi Jean-Philippe Lang,

I have been watching roadmap of 2.6.0 version since long time in order to deploy it my organisation. Today I can see this new tracker here. May i know the details of security permission details , you have decided to incorporate in this tracker.

Regards,
Lajish Lakshmanan

In current versions, permissions for anonymous users and users who are not members of a project can be defined systemwide only, by setting the permissions of the Anonymous and Non member roles.

This feature will introduce 2 built-in groups (Anonymous users and Non members), that can be given different roles on different projects, just like you add users as members of a project.
