Redmine - Defect #18159

Security issue when using local repositories

2014-10-22 22:03 - Luciano Silveira

Status:	Closed		**Start date:**	
Priority:	High		**Due date:**	
Assignee:			**% Done:**	0%
Category:	Security		**Estimated time:**	0.00 hour
Target version:				
Resolution:	Duplicate		**Affected version:**	

Description
Access to local repositories uses the system access rules. Since the system user used to run Redmine is unique, all local repositories must be accessible by this user. So, if a manager of one project knows the path to the repository of another project, he or she can configure a local repository for his/her own project using that path, obtaining reading access to that repository.
