

Redmine - Defect #18250

Subversion Password

2014-10-31 22:03 - alde gott

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	2.4.5
Resolution:	No feedback		
Description I am "was" using a self made ugly password like "kdIWWR"\$%&/"!"\$%(/&%"" to login in to my subversion repo. I am sorry that i cant exactly paste the password i used, i also can't say that i used " at the end and a " at the beginning of the passowrd. anyway, i used rest api in my own application with redmine < 2.5 and it worked. after upgrading redmine to > 2.4 i could not use it anymore. got only 404 without a real usefull information about the error. after i changed my password to something "simpler" it worked. i dont know exacty what has changed or even dont know which version of redmine is working or not. but i think there is something wrong because i was able to check out with svn (terminal client and rapidsvn) without errors. (i am a little sorry but i am a little drunk tonight. sorry for my bad english but i hope that someone will read this an maybe think it has some kind of importance to get fixed) bye aldeGOTT
