Description

If you delete a wiki page, it removes the page's whole history, and the delete action isn't listed in the activity.

This might technically be the correct behaviour for this kind of delete, but I need to delete a page that is no longer needed, but keep the history (it's a wiki after all!) and have the action listed in the project activity like anything else.

Most other wiki delete functions do this - so having redmine's do a permanent delete is rather a suprise.

Some wikis just let you delete pages by saving an empty page, but Redmine doesn't let you do this.

Do you have any resolution on this feature?
Is it too hard to implement? Or are you don`t agree with this concept? Or did you just forget about this issue?
I agree with author, this feauture is must-have in good wiki engine.
