Target version:			
Resolution:			

Description

When changing the state of an issue from resolved to closed, the user is returned to the issue show screen.

However, after such an action I would like to return to the issue list or backlog.

It would be nice to have a second button in the edit issue form, which saves the changes and returns the user to where he came from (the referrer) when he clicks on a button called "Submit and Return" or "Submit and continue"

Currently I have to always click onto my backlog to continue working on the issue list, which is one additional click not needed.

Yes it would be great !

Did you find a way to make that?
