<b>Description</b>			
<p>We're starting to deploy Redmine when a user pointed out that the address provided needed to be updated and should be a hyperlink. I created a normal a tag with an href that goes out in the text/plain section of the email but not the text/html section of the email (which is what Thunderbird displays). Is there some conversion / editing going on here?</p> <p>Example: To: undisclosed-recipients;;</p> <p>-----=_mimepart_547f7f622b402_2fb94315160474c9 Content-Type: text/plain; charset=UTF-8 Content-Transfer-Encoding: 7bit</p> <p>This is a test email sent by Redmine. Redmine URL: <a href="https://---.---.com/---/redmine/">https://---.---.com/---/redmine/</a></p> <p>--</p> <p>You have received this notification because you have either subscribed to it, or are involved in it. ### #1 - 2014-12-03 22:46 - Scott Pestana

To try to clarify, I'm talking about the footer of email notifications.

### #2 - 2015-01-02 05:10 - Toshi MARUYAMA

- Subject changed from *Hyperlink stripped from the text-html mimepart section of email* to *Hyperlink stripped from the text-html mimepart section of email footer*
