Redmine - Feature #18560

Show issues with custom field of type Version as related issues in the Roadmap

2014-12-04 08:34 - Sebastian Paluch

Target version:				
Resolution:				

Description

We use versions to track true SW releases and project milestones. We use the "Target version" to assign issues to true release version and "Target milestone" custom field to assign to project milestone.

Currently the Roadmap shows only issues related to the version by looking on the "Target version" field. For milestones this results with no related issues.

We would like the custom field of Version type to have a configuration option like "Show as related" and then Roadmap to show all issues as related just like those with "Target version" including Estimated Time, Spend Time and other statistics.

This would be a very useful feature, we have exactly the same need here..
I hope to hear good news about it soon

This issue appears very different from the issue #20100 . However, the same solution can follow.

Basically, you can have a 'custom field' "Type" for each version. And then, when you define any other custom field (for issue or otherwise) which is of type version - it should ask for criteria as "field name" and values can be some conditions. If the field type has multiple values it can be selected which ones applies. The versions qualified under that condition will then be appeared in the corresponding version field.

Specifically here, wherever the type= "MILESTONE" they must not be visible.

Following issues have almost the same demands: Do add related
#685
#14250
#18560
#17962
#20100
