

Redmine - Feature #1858

Provide Resources for Webmasters without access to SSH/Shell

Description			
Again, my title says it all. Many modern hosts use cPanel or Plesk, and do not permit their client to use SSH.			
<code>"If the client has cPanel, why do they need SSH access? They could elevate themselves and attack the service!"</code>			
Therefore, Redmine should come with ready-built SQL Queries for people to run in phpMyAdmin, because SSH access with these cPanel/Plesk and Shell-less accounts can start and stop ruby applications via the control panel, but cannot run the rake commands.
