<b>Resolution:</b>	
<b>Description</b>	
<p>Again, my title says it all. Many modern hosts use cPanel or Plesk, and do not permit their client to use SSH.</p> <p>"If the client has cPanel, why do they need SSH access? They could elevate themselves and attack the service!"</p> <p>Therefore, Redmine should come with ready-built SQL Queries for people to run in phpMyAdmin, because SSH access with these cPanel/Plesk and Shell-less accounts can start and stop ruby applications via the control panel, but cannot run the rake commands.</p>
