Target version:	
Resolution:	
Description	
When Markdown is used for wiki and following syntax is used: [link1]: external url	
all link1 links are then pointing to the external url even if internal wiki page "link1" exist.	
Example:	
Link to wiki [[Page]] and link to (outside) [Page] in one sentence. [Page]: http://foo/bar	
Would you please consider increasing the internal links priority?
