

Redmine - Defect #1872

Wiki link syntax commit: "" doesn't work

2008-09-08 18:31 - Simone Carletti

Status:	Closed	Start date:	2008-09-08
Priority:	Normal	Due date:	
Assignee:	Jean-Philippe Lang	% Done:	0%
Category:	Wiki	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:			
Description The wiki syntax commit: used to link hash-named changesets doesn't work. Here's an example: http://code.simonecarletti.com/issues/show/23 It seems I'm not the only one affected by this issue: http://www.redmine.org/boards/1/topics/show/2182

Could you try these request :

```
SELECT `changesets`.* FROM `changesets` INNER JOIN repositories ON changesets.repository_id = repositories.id  
where scmid LIKE '721035552c81cbe3fd9ab91ae0d4820463be465d';
```

#2 - 2008-09-08 22:30 - Simone Carletti

It returns 1 record, as expected.

#3 - 2008-09-09 20:24 - Nicolas Chuche

Could you put information
- Ruby implementation and version
- Rails version (rails --version)
- Operating system (precise if you're using cygwin when running on Windows)
- Database used, and its version

And output of script/about please.

It seems I'm not the only one affected by this issue:
<http://www.redmine.org/boards/1/topics/show/2182>

Unfortunately I can't provide details about script/about.
Because my GEM repository includes also Rails 2.1 and 2.1.1, Redmine 0.7.3 has a really odd bug that prevents any rake task to be run.

Each time I try to run a rake task, it returns

```
Your config/boot.rb is outdated: Run "rake rails:update".
```

It seems to be a quite common issue

<http://www.redmine.org/boards/1/topics/show/1187>

Anyway, here's the information you requested:

- Ruby 1.8.5 (2006-08-25) [i386-linux] on Debian Etch
- Rails 2.0.2
- mysql Ver 14.12 Distrib 5.0.16, for pc-linux-gnu (i386) using readline 5.0

I don't have plugin engine installed.

Redmine version is 4.x (but it didn't work with 3.x as well).

Redmine version is 4.x (but it didn't work with 3.x as well).

You speak about Redmine 0.7.3 then 4.x then 3.x. 0.7.3 is the one you use ?

#6 - 2008-09-09 22:54 - Nicolas Chuche

Can't reproduce the bug here :-).

Could you try in development mode and look at the log ?

What does

```
grep -r 'INNER JOIN repositories ON changesets.repository_id' log
```

I'm sorry, I was talking about **RedCloth** 4.x and 3.x.

#8 - 2008-09-10 01:00 - Nicolas Chuche

I'm sorry, I was talking about **RedCloth** 4.x and 3.x.

This transformation isn't done in RedCloth but in the application_helper.rb in the textilizable function around line 387. I can't see any bug in the regexp.

Thanks Nicolas for pointing out the `application_helper`.
I investigated the issue and I probably found the problem.

In my code I was using the following syntax

```
commit : "721035552c81cbe3fd9ab91ae0d4820463be465d"
```

instead of

```
commit : 721035552c81cbe3fd9ab91ae0d4820463be465d
```

(notice the double quotes).

If you give a look at the help page http://www.redmine.org/help/wiki_syntax.html, it gives instructions to use quotes.
At this point, I guess the documentation should be fixed to prevent further confusion.

#10 - 2008-09-13 11:30 - Jean-Philippe Lang

- *Status changed from New to Closed*

Both syntaxes (with and without double quotes) are supported and work for me using current trunk.
But I've changed the help since the double quotes are useless in this case.

Please reopen if you have any further information about why it doesn't work with double quotes on your install.
