

Redmine - Defect #18777

Moving column to top of "Select Columns" results in loss of all other column selections

2015-01-08 05:22 - Randy Syring

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Jean-Philippe Lang	% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:	2.6.1	Affected version:	2.6.0
Resolution:	Fixed		
Description Workflow to reproduce: 1. choose a parent project that has sub-projects, click in Issues 2. by default, six columns are shown 3. expand options -> choose "Project" -> click right arrow to move it to "Selected Columns" 4. click the double up arrow (or click single up arrow multiple times) to move "Project" to the top of "Selected Columns" 5. click Apply Expected: seven columns with "Project" being the first column after the issue id. Result: only the Project column stays selected. The page, when it returns, has a column for Project and the issue id, but all the other columns are no longer displayed. Further Information After more digging, its worse than just moving it to the top. Every time you move a column up in "Selected Columns" you lose the columns under it as selected when you click apply. Environment: Redmine version 2.6.0.stable Ruby version 1.9.3-p484 (2013-11-22) [x86_64-linux] Rails version 3.2.21 Environment production Database adapter PostgreSQL SCM: Mercurial 2.8.2 Filesystem Redmine plugins: redmine_checklists 3.0.2 redmine_drafts 0.2.0
