

Redmine - Defect #18781

Redmine::FieldFormat::IntFormat does not accept "real" Integer values

2015-01-08 09:09 - Sascha Hübner

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Jean-Philippe Lang	% Done:	0%
Category:	Code cleanup/refactoring	Estimated time:	0.00 hour
Target version:	3.0.0	Affected version:	2.5.1
Resolution:	Fixed		
<p>Description</p> <p>I had the Problem of setting the value of a custom field in my code and therefore validating the new (calculated) value. The CustomField had the format Redmine::FieldFormat::IntFormat. The new value was a true Integer: 1 But the value was refused with the message that it's not a Number!</p> <p>The Reason is, that Redmine::FieldFormat::IntFormat validates the value with RegExp:</p> <pre>value =~ /^[+-]?\d+\$/</pre> <p>which will not return true if value is not a String. I understand, that "normally" values of custom fields will be set via forms and so usually all values will be Strings.</p> <p>But I think IntFormat's validation should accept real Integers also!</p>
