

Redmine - Feature #18848

Expand custom field API

| Description Hi, I'm using (or want to use) the custom field API to set and update custom field values (especially for list types). Unfortunately at the moment only the :index function is queryable through the API. It would be great if one could use the :show, :create, :update and :destroy functions. The idea behind this is I need a possibility for non Redmine admin users to update custom field values. | |
