

Redmine - Defect #18928

Incorrect path to uploaded files in redmine 2.6.1

2015-01-21 19:29 - Mad Geniy

Status:	Closed	Start date:	
Priority:	Urgent	Due date:	
Assignee:		% Done:	0%
Category:	Attachments	Estimated time:	0.00 hour
Target version:		Affected version:	2.6.1
Resolution:	Invalid		
Description I use 2.6.1 version of redmine, upgreaded from 1.2.x and with database imported from bitnami redmine stack. What wrong? All links in my redmine like "redmine/attachments/XX/xxx.xx". But uplodaded files are in "redmine/files/xxxx/xx/xxx.xx" How I can correct it?			
Related issues: Has duplicate Redmine - Defect #18948: Corrcrt files directory, incorrect link... Closed

But uplodaded files are in "redmine/files/xxxx/xx/xxx.xx"

It is design.

But I can't download it. Strange behavior, because uploaded file have to be downloaded. Isn't it? How I can resolve it? I don't know RoR.

[RedmineUpgrade](#)

All file uploads are stored to the files/ directory. You can copy the contents of this directory to another location to easily back it up.

#8 - 2015-01-26 10:42 - Mad Geniy

My situation:

I uploaded file, for example, "some_file.png" to Wiki page. Then, I wrote some text and use this file:

```
my some super text illustarted with image !some_file.png!
```

After uplodng file, Redmine puts it into /files directory.

But after saving my WikiPage, "some_file.png" has a link at /attachments file and I can't see image, only link to file "some_file.png", and if I click on it, I get 404 error, because no files in /attachments directory.

Real example:

I have file in

../redmine/files/2015/01/150121205344_a406c999df9d9de8ec63e11bed0c69b4.jpg

but link to this file in web interface of Redmine is

<http://tasks.spbdk.ru/attachments/download/20/%D0%91%D1%8D%D0%BA%D0%B0%D0%BF.jpg>

I can't understand why and how to fix it. Please, help me.
