Description Is there anyway (or future plans) to enable the possibility of the creation of the item 'Custom field' and the automatic population of its 'possible values' field. At the moment using REST API you can receive xml of all custom field '...custom_fields.xml' but would be handy if there was a way to create/edit custom field via '...custom_fields\1\edit.xml'. Is there a Plugin that could be added to enable this functionality? Thanks.
