

## Redmine - Patch #1901

### RESTful URLs for everything

2008-09-15 03:23 - Gerrit Kaiser

<b>Status:</b>	Closed	<b>Start date:</b>	2008-09-15

<b>Assignee:</b>	Eric Davis	<b>% Done:</b>	100%
<b>Category:</b>		<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	0.9.0		
<b>Description</b>			
<p>I did some work on making Redmine's URLs adhere to Rails's RESTful conventions. This is necessary if redmine wants to be ActiveResource-compatible. Imho its worthwhile anyway, as redmine's current URLs aren't particularly readable.</p> <p>Attached is a patch against current SVN. It tries hard not to touch any views and is only minimally invasive in the controllers themselves and non-related tests.</p> <p>If this generates enough interest, I would go on and modify the forms to iron out the last kinks (use DELETE and PUT HTTP methods where appropriate). Then it would be possible to gradually move the app to use named routes like <code>new_issue_path</code> or <code>project_issues_path('ecookbook')</code> instead of the params hash that is used anywhere. This would de-couple the views and unrelated tests from the URL scheme, allowing further changes. Apart from that it should prove much more readable.</p> <p>I would propose refactoring the controllers to follow the rails convention of <code>#create</code>, <code>#update</code> etc. as a followup, but that is not even necessary in order to have a full ActiveResource-compliant API.</p> <p>I made every effort to retain backwards compatibility, left all the old routes intact as a fallback. So incoming links <i>should</i> still work. As the old routing was completely untested, I can't vouch for that though.</p>

#### Associated revisions

##### Revision 2317 - 2009-01-26 02:47 - Eric Davis

Converted routing and urls to follow the Rails REST convention.

Patch supplied by commits from Gerrit Kaiser on Github. Existing routes will still work (backwards compatible) but any new urls will be generated using the new routing rules.

Changes listed below:

- made the URLs for some project tabs and project settings follow the new rails RESTful conventions of `/collection/:id/subcollection/:sub_id`
- prettier URL for project roadmap
- more nice project URLs
- use GET for filtering form
- prettified URLs used on issues tab
- custom route for activity atom feeds
- prettier repository urls
- fixed broken route definition
- fixed failing tests for issuecontroller that were hardcoding the url string
- more RESTful routes for boards and messages
- RESTful routes for wiki pages
- RESTful routes for documents
- moved old routes that are retained for compatibility to the bottom and grouped them together
- added RESTful URIs for issues
- RESTfulness for the news section
- fixed route order
- changed hardcoded URLs in tests
- fixed badly written tests
- fixed forgotten parameter in routes
- changed hardcoded URLS to new scheme
- changed project add url to the standard POST to collection
- create new issue by POSTing to collection

- changed hardcoded URLs in integrations tests
- made project add form work again
- restful routes for project deletion
- prettier routes for project (un)archival
- made routes table more readable
- fixed note quoting
- user routing
- fixed bug
- always sort by GET
- Fixed: cross-project issue list should not show issues of projects for which the issue tracking module was disabled.
- prettified URLs used on issues tab
- urls for time log
- fixed reply routing
- eliminate revision query parameter for diff and entry actions
- fixed test failures with hard-coded urls
- ensure ajax links always use get
- refactored ajax link generation into separate method

#1901

## Revision 3074 - 2009-11-16 20:39 - Jean-Philippe Lang

Use /raw/ for url instead of ?format=raw for getting raw repository files (#1901, #4119).

## History

---

### #1 - 2008-09-15 12:49 - Markus Knittig

+1

Looks really good. I would help refactoring, in fact started some refactoring. See [#296](#)... ;)

### #2 - 2008-09-16 00:09 - Eric Davis

I'm wondering if there is an easier way to do these refactoring than large patches. I've pushed my developer svn git repository to [GitHub](#). This is the repository I use to push changes back into the Redmine svn. If you want to clone it, I'll take pull requests and patches and push them back into Redmine's svn.

(I have to use a different git repository because git-svn uses the url to manage the changesets and Rubyforge has a different url for developer access.)

Finally got around to merging these changes into a git clone of Eric's semi-official git-svn-clone.

You can fetch the changes [from github](#). As this is more or less a moving target and quite a large change, I agree with Eric that this is the best way to move on. I can create a patch file if needed, though.

### #7 - 2009-01-09 21:58 - Eric Davis

- Assignee set to Eric Davis

Gerrit Kaiser wrote:

I'll integrate it soon. Thanks for making a separate branch for them, it makes it a lot easier for me.

### #8 - 2009-01-16 18:59 - Patrick Naubert

#### #9 - 2009-01-26 02:02 - Eric Davis

- Status changed from New to 7

Gerrit Kaiser,

I've very impressed with these patches. I'm reviewing them right now and I'm mostly concerned that the old routes are still available for backwards compatibility but I believe you handled that. The url format is very nice:

- "http://www.redmine.org/issues/1901"
- "http://www.redmine.org/projects/redmine"

#### #10 - 2009-01-26 02:47 - Eric Davis

- Status changed from 7 to Resolved

- Target version set to 0.8.1

- % Done changed from 0 to 100

The set of patches have been committed in [r2317](#). I squashed them into a single commit so they can be reverted in svn easily, if needed I can revert and split them into their individual commits. This commit could potentially cause bugs to appear so we'll need to keep an eye out for any link\_to or routing errors. I'm going to deploy this update to my server so I can watch for exceptions as it's used.

Change log follows:

**#11 - 2009-01-26 11:12 - Gerrit Kaiser**

thanks for applying this. but perhaps a major change like this would be better for a 0.9 release than a .1 point-release?

**#12 - 2009-01-26 12:24 - Jean-Philippe Lang**

- Target version changed from 0.8.1 to 0.9.0

Indeed.

**#13 - 2009-02-03 01:17 - Eric Davis**

- Status changed from Resolved to Closed

Gerrit Kaiser wrote:

Jean-Philippe, is there any documentation on what is allowed in a point release (0.0.x) versus a major release (0.x.0)? I always thought *only* database migrations weren't allowed in point releases.

Closing issue as complete.

**#14 - 2009-02-03 18:17 - Jean-Philippe Lang**

A minor release should include fixes and some enhancements/features that do not require a database migration.

This change doesn't touch the database indeed but it's rather big and not a real feature (it doesn't bring new functionalities nor improve the existing ones). It's a first step for adding a rest API later but I don't think this API will be added in the 0.8 branch.

Got it, I agree with the decision I just wanted to clarify it for reference. I started a basic wiki page describing the how the releases work: [ReleaseManagement](#).

**#16 - 2009-05-06 11:36 - Yohann Monnier**

Hello,  
does it mean it will not be available until 0.9 release ?

**#17 - 2009-06-23 12:28 - sunday walker**

- Status changed from Closed to Reopened

This is nice.

Can you change URL as follows, it is better than now ?

<http://www.redmine.org/projects/redmine/repository/revisions/2317/entry/trunk/config/routes.rb?format=raw> |  
v  
<http://www.redmine.org/projects/redmine/repository/revisions/2317/raw/trunk/config/routes.rb>

**#18 - 2009-10-05 00:15 - Alex G.**

Guys, could you make a conclusion on this feature?

In order to start using it, we'd like to know the final status on this if it is resolved or will be improved/changed somehow.

As i saw, Eric is working on practical approving of the feature.

**Eric**, could we have some feedback from time to time here or in a separated thread to be up to date?

Thanx in advance

**#19 - 2009-10-20 03:10 - Eric Davis**

<http://www.redmine.org/projects/redmine/repository/revisions/2317/entry/trunk/config/routes.rb?format=raw>

<http://www.redmine.org/projects/redmine/repository/revisions/2317/raw/trunk/config/routes.rb>

I don't care for the "raw" url but it makes no different to me. Anyone else mind if I change it? Also, would you mind creating a new feature request if the issue has already been closed for more than 3 months? It helps cut down on the confusion and will make sure others notice the new request.

Alex G. wrote:

It's complete other than the change sunday walker proposed. The urls will evolve over time but should be backwards compatible for the most part (i.e. go ahead and use these urls).

I am sorry to confuse you.

For example, it is very convenient to refer to the HTML and a picture file referring from the HTML .

Ex.

HTML Files:

<http://www.redmine.org/projects/redmine/repository/revisions/2317/raw/trunk/test1.html>

```
<html>
<head>
<title>test1</title>
</head>
<body>
<a href="test2.html"></a>
</body>
</html>
```

<http://www.redmine.org/projects/redmine/repository/revisions/2317/raw/trunk/test2.html>

```
<html>
<head>
<title>test2</title>
</head>
<body>
<a href="test1.html"></a>
</body>
</html>
```

Image Files:

<http://www.redmine.org/projects/redmine/repository/revisions/2317/raw/trunk/test1.png>

<http://www.redmine.org/projects/redmine/repository/revisions/2317/raw/trunk/test2.png>

Would you please make the copy of this issue if you want to make the another issue.
