I'm not able to reproduce with current 3.0-stable.

I've set the tracker field to read-only for a certain role. A user with this role doesn't have the tracker field on the issue form (as expected), but he can choose the status. And the issue is created with this status.

I have not tested with latest 3.0 branch but I can confirm this exists in 3.0.0.stable release.

Thanks. I think it was fixed by [r14095](#) in 3.0.1. I'll try with 3.0.0 and will add a test for this.

I confirm that the problem exists in 3.0.0 and was fixed in 3.0.1.
