There is something bad with Slovenian language file sl.yml.

Affected version is 2.6.2, but older versions suffer too. After removing sl.yml, /settings page appeared normally.

The root cause could be some plugin in my system.

The log does not tell which line of sl.yml causes the problem. It if would help, I may investigate which one of the labels is the problem.

**#3 - 2015-02-25 18:47 - Ivan Cenov**

I returned sl.yml at its place and restarted Redmine and the browser Firefox. Internal error did not occurred. However in the profile page, 'Slovenščina' did not appeared in language selection drop-down list. There is nothing suspicious in the log file.

Please run bundle exec rake tmp:clear.  
Items in the drop-down list are cached.

- Resolution set to *Invalid*

Maybe the problem was solved, because Ivan Cenov contributing so frequently now. Closing.
