Description	
<p>For example, right now we're able to write r12345 and Redmine will parse it and display a link to the revision or changeset. However, it would be useful to be able to use specific syntax to have Redmine display the diff directly in the comment.</p> <p>Existing format:</p> <pre>{{thumbnail(existing_diff_view.png, size=400, title=Thumbnail)}}</pre> <p>or as CodeRay would display it:</p> <pre>Index: field_format.rb ===== --- field_format.rb (revision 12344) +++ field_format.rb (revision 12345) @@ -315,7 +315,7 @@ end def edit_tag(view, tag_id, tag_name, custom_value, options={}) - view.hidden_field_tag(tag_name, '0') + + view.hidden_field_tag(tag_name, '0', :id => nil) + view.check_box_tag(tag_name, '1', custom_value.true?, options.merge(:id => tag_id)) end</pre> <p>Thanks for your consideration!</p>
