

Redmine - Feature #1926

Issues identifiers

2008-09-19 10:41 - Benson M

Status: Closed	Start date: 2008-09-19
Priority: Urgent	Due date:
Assignee: Jean-Philippe Lang	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version:	
Resolution: Wont fix	
Description We would like to assign issue identifiers based on the project name. Currently, Redmine uses issue's id (which is auto-increment) to search an issue and in many other places. Our issues are increasing daily and the number (e.g. #1384) are not so friendly for us as developers and our clients. We therefore would like to have a 4 letter project code and start naming the issues from 1, eg for a project called Redmine, we could have something like REDM01 for issue 1, REDM02 for issue 2 etc and for a project Ruby we have RUBY01,RUBY02....

History

#1 - 2008-09-19 13:29 - David Marín Carreño

- Target version deleted (0.7)

#2 - 2008-09-19 17:34 - Jean-Philippe Lang

- Category deleted (Search engine)
- Status changed from New to Closed
- Resolution set to Wont fix

As already mentioned in [#282](#), [#538](#), this won't be implemented.

#3 - 2008-09-22 14:55 - Benson M

Any pointers on how this can be done? I need to add this for my organisation and I would be glad to have suggestions on how this could be implemented.

The release happened. Now please help me make it stable (or to make sure, that it's stable). Thanks!
