Description

Project Quick Jump Dropdown List - Sorting

Many of our users would like to see the list of current user's projects be sorted or sort-able.

Now

It looks like it is ordered in the same way the projects list page is ordered.

Problem

The problem with this is that once we have a lot of projects and sub-projects, the list is extremely hard for most users to use.

Proposal

I propose that the dropdown list be sort-able by the user in some fashion or to have a search capability.
Any method that makes it easier for the user to use the project quick jump dropdown to see a hierarchy when they want to, or to find a specific project by name when they want to.
In its current state, the dropdown is basically useless to our users due to the number of projects and sub-projects.

This is another one of our biggest and most common complaint from the end-user group. It is very similar to the custom fields sort order for the "add filter" dropdown.

Incremental search for projects in "Jump to project" drop-down was implemented by [#23310](#), will be available in upcoming Redmine 3.4.0.
I am closing this issue.
