Description

Both SSL and TLS connections fails dues to certificate violation as discussed on this forum. The resolution is in this message.

I hacked lib/redmine/imap.rb in the same way and it worked fine, so, I'm requesting a way to pass an option from command line for certificate verification.

I have tested also this and it works but as discussed it affects entire application.

I have tested also #16823.

Could you try #19232?

#2 - 2015-03-20 10:15 - Sebastian Paluch

Unfortunately, with STATTLS I get bad response error complaining about sending command in invalid state :(
