

Redmine - Defect #1944

Malformed link inside a code tag

2008-09-24 19:12 - Lobo tuerto

Status:	Closed	Start date:	2008-09-24
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Wiki	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Cant reproduce		

Description

Here is my conf: * your database version (Postgresql 8.3) * your Ruby version (ruby 1.8.6) * your Rails version (Rails 2.1.1) * your Redmine version (devel) and the exact revision ([r1902](#))

The problem is when you have something like this in a wiki page:

```
has n, [[Banco|:bancos]]
```

It gives out something like:

```
http://localhost:3000/wiki/sif/<span_class="co">Banco<span>
```

It should be:

```
http://localhost:3000/wiki/sif/Banco
```

Which, shouldn't.

History

#1 - 2008-09-24 20:58 - Lobo tuerto

Woops, I meant: which, isn't.

#2 - 2010-06-26 22:17 - Jean-Baptiste Barth

- Status changed from New to Closed

- Resolution set to Cant reproduce

Works fine for me :

```
has n, [[Banco|:bancos]]
```

produces

```
<p>has n, <a href="/projects/myproject/wiki/Banco" class="wiki-page new">:bancos</a></p>
```

...which is desired behaviour in my opinion.

I close the issue, feel free to reopen, and sorry for the long silence.
