Redmine - Defect #1947

Parsing of issue #s in commit messages fails if number followed by a comma, etc.

Resolution:	Invalid		**Affected version:**	

Description

We have found that if an issue number is followed by a comma or any other punctuation then the parsing of that as an issue # fails. Examples:

Works:

```
Issue #123
```

Fails:

```
Issue #123,456
```

PS: Did a search for an existing issue or patch and didn't find one, if this is a dup, just mark it as such.

History

Lane Roathe wrote:

```
    Issue #123,456
```

Redmine expects that line as follows:

```
Issue #123,#456
```

That will work I guess. # is the default character in Redmine which should be prepended before an issue-number to let Redmine detect (and parse) it accordingly.

Please report back if it works so this issue could be closed when the issue is solved.
HTH...

#2 - 2008-10-25 12:22 - Jean-Philippe Lang

- Status changed from New to Closed

- Affected version (unused) deleted (0.7.3)

- Resolution set to Invalid

- Affected version deleted (0.7.3)

As Mischa said, each issues id must be prefix with #.
