Description			
<p>A lot of plugins was registered long time ago when check for update feature was not implemented yet. And they have link with dashes http://www.redmine.org/plugins/progressive-projects-list.</p> <p>Of course there is an option to update plugin page and rename its id. But page is indexed and probably stored into somebody's bookmarks.</p> <p>It would be great if check for updates could handle dashes as well as underscores while looking for the proper plugin.</p>
