Redmine - Feature #1963

Ability to filter issues by project

2008-09-28 11:14 - Ewan Makepeace

Resolution:	Fixed			

Description
If I view all issues for a parent project I can filter the view by subproject, or turn off all subprojects to view only the issues attached to the parent. However when I view all issues from the root level there is no apparent way to filter by project?

This would certainly be a handy feature. I just hit a situation now where I wanted to see open tickets for several projects combined. These projects aren't parent/sub-projects of each other, they're just several disparate projects I happen to be involved in.

Of course, I could filter for tickets assigned to me, but I wanted an overview of all the tickets in the target projects.

I would like to see a Project filter added to the issues page as well. It would be most useful on the global "View all issues" page.

#4 - 2009-06-18 19:18 - Alex G.

1
Our team is running 40 small projects and almost all the team members are involved into all the projects (this is also applicable for the support teams).
This is definitely important for us to have the global "View all issues" report which could be filtered by project(s).

thank you for your effort.

Guys,

Are we talking about this? if yes then we already have this. (I am using the trunk version)

 RedMine_SubProjectFilter.jpg
Please check r350 & r2264

HTH...

Regard,
Nanda

No we are talking about the issues list when **not** focussed on a particular parent:

Indeed, the subproject-filter isn't available in the global (cross-project) issue list. However, in latest trunk you are at least able to group (and collapse through JS) the global issue list by project (see issue #2679). It's not the same as such a filter as Nanda describes, but it is at least something for the moment...

   grouping_issues_by_project.jpg

Though, this issue should not be considered as resolved as such since you are specifically requesting the filter in the global issue list I presume...

Kind regards,

Mischa.

Added project-grouping screenshot.

#9 - 2009-06-30 03:24 - Ewan Makepeace

First of - that looks super cool, and I can see great uses for what you have done.
However there is an architecture problem - the data is paged on the server and client side grouping can only work on the subset of issues sent from the server. In Indonesia where bandwidth is constrained my default view is to see only 5 issues at a time for example.
So - unless we can filter by project on the server, we wont get the issues we want in the browser and client side grouping (while nice) wont solve that problem.
Also a **huge** application for this is saved queries - I want to build and save queries for certain groups of projects. That requires there to be a field in the query builder for me to save (as was done with Sort order?)

You should thank Jean-Philippe (and maybe Andrew Chaika) for the issue grouping feature. I haven't done anything for it's implementation. I don't even have commit rights to the redmine svn-repo (don't deserve them either :)

This indeed makes clear to me why you need the sub(project) **filter** (instead of grouping) on the global (cross-project) issue list. Though one caveat (maybe even the reason why it's not implemented yet): currently the filter is actually a **subproject**-filter and since while on the global issue list there is no sub-project available since we not on a project issue list... :S

Indeed. But I guess that the **filter** becomes also available on the global custom query "builder" once the filter has been implemented on the global issue list filters as requested. Though imho that is not the same of the "Sort order" option in the custom query "builder"...

HTH!

Kind regards,

Mischa.

BIG +1 for what its worth

#12 - 2010-07-08 17:54 - Anonymous

I would also like this. But in the meantime, similar functionality is available via this plugin: http://www.redmine.org/wiki/1/PluginGlobalFilter

#13 - 2010-08-11 23:54 - Mischa The Evil

- Status changed from New to Resolved

- % Done changed from 0 to 100

- Resolution set to Fixed

This issue was duplicated by issue #5084. Issue #5084 has been resolved (committed to trunk) recently and is scheduled to be included in Redmine 1.0.1.

Thus, now we have:

- On parent projects views;
    - Subproject filter (both in issues-list filter-section and in "custom-query builder")
    - "Group results by: Project" option (both in issues-list options-section and in "custom-query builder")
- On cross-projects views;
    - Project filter (both in issues-list filter-section and in "custom-query builder")
    - "Group results by: Project" option (both in issues-list options-section and in "custom-query builder")

Also, we still have the additional functionality of the Global Filter plugin.

#14 - 2010-09-29 22:29 - Felix Schäfer

- Status changed from Resolved to Closed

Closing this as #5084 has been committed to 1.0-stable.
