**Description**

We have a problem with rewrite data if one user save and other user resave data.

Scenario:
1. First user create new issue. Set **Status** to **new** and set **Done** to **0%**
2. Second user in diferent browser on diferent computer open this issue and nothin do it, only open this issue.
3. The first user change **Done** from **0%** to **20%** and save it.
4. Second user perform refresh (F5) in browser. After refresh update **Version** from **1.0** to **1.2** and **there is the problem**. With the change **Version** is changed also **Done** from **20%** back to **0%**

We simulated this problem several times. I know, we have version 2.5.1, is this bug repaired in newer version?
