

Redmine - Feature #1973

Hierarchical issue templates

2008-09-30 17:39 - Ingmar Heinrich

Status:	New	Start date:	2008-09-30
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:			
Resolution:			
Description <p>There are many companies that have recurring complex workflows with partly parallel strands of action. Of course, one could create a 'root' ticket and a hierarchy of related issues for this, but this has large potential for error.</p> <p>It would be great to have hierarchical issue templates, e. g.</p> <p>Main Ticket Subticket 1 Subticket 2 Subticket 2-1 Subticket 2-1 Subticket 3</p> <p>If I create an issue from the template Main Ticket, a total of 6 issues gets created, with the correct relations. Child tickets should inherit some of their parent's settings, like Priority.</p> <p>As an extension, also relative start and/or due dates as well as different kinds of issue relations could be reflected.</p>

I could probably write a plugin. Could someone give me some hints?

rather for Issue, I think, it would be usefull for Wiki-pages and File/Folder Structures.

Lets assume a company has a defined process, which contains folder structure with document templates in it. This all put into a zip file and for every new project it is unzipped and used...

Sample of structure:
01-project planning
02-design
03-engineering
04-testing
05- ...

each of this folder could have a subfolders with document-templates.

Could this be done?

... back to Issue Templates... sorry, I was to fast with this sentence: after reworking it a bit -- it would be also usefull! :)

Wanted to add, that it would be nice to have dependencies/behavior on that basis too...

e.g. Feature [#123](#)

- WorkItem [#1234](#)

- WorkItem [#1235](#)

where:

- the percentage of [#123](#) complete would reflect the percent completed of both child items

- the feature (parent item) could not be closed until all child items are closed

etc.

There is a plugin for wiki templates. The fetaure is pretty near and code can be reused or even just advanced to it.

for the [plugin extension here](#)
