| **Target version:** | | | | |
| **Resolution:** | | | | |

**Description**

'''Steps to reproduce'''

- create a project and subprojects
- create an issue in a subproject
- go in "Issues" page of the mother project
- ensure that "Project" and "Target version" columns are selected

'''Desired result'''

- Because the "Project" column is selected, the "Target version" should not be prefixed with "<Project> - "

'''Actual result'''

- Information is redundant, one can read the Project name twice (or more if other "Version" columns - such as custom version fields - are displayed as well)
