Description

When using the rest API, it would be useful to be able to pass a flag to control whether or not email notifications get generated as a result of the update.

When doing automatic updates via rest, i have a case where there are several steps involved (create an issue, upload several files with the issue number embedded in the name, etc). It is not possible to consolidate these multiple updates into one operation that would generate one email, so I would like to turn off the notification emails for some of these updates.
