

Redmine - Feature #20057

Why Group can't be used as a Watcher in Issue?

2015-06-09 22:40 - Rostislavs Kusnirenko

Description Hi, is it correct, that "groups" functionality allows to define group(s), add members (users) to that group(s) - and after that, these new group(s) can be used: <ul style="list-style-type: none">• group can be member of particular project (with particular role)• group can be used in reports• group can be defined as Assignee in issue All mentioned functionality I get from changelogs (!!!) - as, if I correctly understand, Help is far-far from the current, latest Redmine release... (3.0.0+). Anyway, if you can comment statements above - I will be happy to receive your clarification. However, my real question is following: <ul style="list-style-type: none">• why it's not possible to use group as a Watcher? (in Issue)? Thanks in advance, Rostislav

Sorry, typo:

...and after that, these new group(s) can't be used...

Correct is:

...and after that, these new group(s) **can be** used...

Unfortunately, I can't edit ticket's definition, so, I wrote correction as comment..

#2 - 2015-06-10 04:36 - Mischa The Evil

- Description updated

- Status changed from New to Closed

- Resolution set to Invalid

I've modified the description according to the request.

Regarding your *question*: it actually belongs to the [forum](#). We don't provide support using issues, they are designated for defect reports, feature requests and patches only.

Though, I think the answer is quite simple: AFAICT it has not been implemented and AFAIK it has not been requested yet.

Dear Evil The Mischa,

I am so, so sorry that I broke rules of your tracker.. Please, excuse me!

I will try to proceed with my question on the mentioned forum.

Rostislav

Dear Mischa The Evil, I have checked forum and think again on what you have said in your comment - then should I re-open my question as "Feature"? (Feature Request)? But you (Development Team) or community, will vote (if will vote :)) for it - should it be included into roadmap or no. Correct?

And second. I have another, seems, not a question, but feature request - functionality "Category" (in "Issues") - why not to made it "shared" between Projects, e.g. configurable - some Category can be exclusive for particular Project, some - shared between many Projects. Should I create CR - or...?

Thanks in advance!!! And sorry, if I again wrote in incorrect place / incorrect "format" !!

Rostislav

I think this is a part of [#1853](#).
