Description

A little but simple to realize improvement:

When you go to the wiki and click the *Index by date* link you could show the revision number with each entry. And also you could show a link to the diff view, comparing to the previous link. With this one can quickly watch what has changed.

So that it looks similar to this example:

2015-06-16

- [DeEmailConfiguration !#8](#) (diff)
