Description

This patch makes wiki formatting pluggable.

You can add a new wiki formatting as a plugin. For example, I wrote RD plugin. This provides redmine with Ruby Document Format, which is the format Ruby Issue Tracking System uses.

textile plugin

In the patch [[make-wiki-formatters-pluggable.patch]], textile formatter is still embedded in Redmine.
But it is possible to extract the embedded textile formatting from redmine. [[extract-textile-formatting-as-a-plugin.patch]] does this.
Perhaps, this patch needs git-am(1) because it renames some files.

+1.

#3 - 2008-10-27 12:26 - Jean-Philippe Lang

- Status changed from New to Closed

- Target version set to 0.8

This nice feature which is committed in r1955 with minor changes.

One thing concerning your RD plugin:
I removed the jstoolbar stylesheet include tag from the base layout so that plugins can use other libraries to render the toolbar. So, you'll have to add it in #heads_for_wiki_formatter. It would look like this:

```
def heads_for_wiki_formatter
  stylesheet_link_tag('jstoolbar') +
  stylesheet_link_tag('rd', :plugin => 'redmine_rd_formatter')
end
```

Your plugin was tested OK with this change.

Concerning your second patch, I prefer to keep the Textile formatter bundled in the app because I don't want to rely on Engines' mirror files mechanism for such a core functionality.

Thanks.

#4 - 2008-11-09 13:06 - Yuki Sonoda

Thank you, Jean-Phillipe. I committed the change you suggested into http://github.com/yugui/redmine_rd_formatter/tree/master.

And I think this plugin can show the best example of wiki formatter implementation for plugin developers. Could you add the plugin to http://www.redmine.org/wiki/redmine/Plugins ?

#5 - 2008-11-09 13:18 - Jean-Philippe Lang

Indeed, a link to your plugin was added to the plugin list.
