Target version:	Affected version: 2.6.0
Resolution: Invalid	

Description

Hi! I've been having problems with the Email Notification of the Redmine that I installed on an Ubuntu server. I installed a 2.6.0 version of it and when I was trying to configure the email notifications, at redmine/config/configuration.yml, I wasn't getting any email whenever I'm testing it. Is there any way you could help me with my problem?

Here is the current config of my configuration.yml:

```
1. Outgoing email settings

production:
  email_delivery:
    delivery_method: :sendmail
    smtp_settings:
      address: localhost
      port: 25
      domain: example.net
      authentication: :login
      user_name: "redmine@example.net"
      password: "redmine"

development:
  email_delivery:
    delivery_method: :sendmail
    smtp_settings:
      address: 127.0.0.1
      port: 25
      domain: example.net
      authentication: :login
      user_name: "redmine@example.net"
      password: "redmine"
```

Great help is well appreciated! Thank you..
