

Redmine - Defect #20397

project:someproject wiki syntax should link to project with identifier "someproject", not name.

2015-07-23 12:29 - Paweł Hikiert

Target version:		Affected version:	
Resolution:			
Description			
Current code tries to match identifier OR name, which can lead to 'mislinks', as described in the first post of this thread: How to get project's numeric id?			
I have several projects on Redmine, let's say one of them has identifier "some-identifier-1" and name "project", and the other has identifier "project" and name "project".			
I'd like to link to project page (not wiki page!) of project with identifier "project"			
[...]			
Linking to project:project links to project with identifier "some-identifier-1", because my Redmine (2.4.2.stable from Ubuntu 12.04) code tries to match identifier OR name, and that's the first project it finds.			
I propose this patch to take only project's identifier into account when creating wiki links.

- Target version deleted (3.2.0)

#3 - 2016-03-17 20:24 - Jean Louis

+1 I have also bug with name, I prefer also to use textual identifier, we don't have access to the numeric id
