Description

It could be useful (at least for me) to have a function next to "edit" on wikipages which allows me to issue a ticket directly from that wikipage with a wikilink to that wikipage in the ticket description field or even better in the subject field of the new ticket.

Hope somebody understands what I mean and will be able to hack this...thx and thx to all, who made redmine possible until now, its very very useful

As you thought: at least I didn't get what you mean...

Hi Robert,
here is a little picture to illustrate what I mean.
It's really simple and would save lot of time and prevents mistakes because with such a feature its not longer neccessary to type the corresponding wiki-link manually in the new ticket. I use mostly the wiki feature of redmine and the ticketsystem is used to improve the quality of wiki content.
Thx for your help

Ah, got it. Nice feature.

+1
