Help cursor showing up on span tags with title (#20633).

Revision 14553 - 2015-09-12 14:31 - Jean-Philippe Lang

Merged r14552 (#20633).

History

#1 - 2015-08-28 21:49 - Martin Dubé

An exemple would be a plugin using select2 (https://select2.github.io/) which add some span elements having a title to the select box and thus get underlined + a help cursor.

- Target version set to 3.1.1

Do you mean we should change span[title] (for example: span[cf_title])?

#4 - 2015-09-11 13:39 - Martin Dubé

I'm not an expert, but changing span[title] to span[cf_title] would fix the issue I see (help cursor at various places), but break the custom field tooltip (as it is the "title" that makes the hovering tooltip appear).

I think the span used for custom fields should be given a class to that this class can be targeted by the css, such as in this sample:
