Target version:		Affected version:	
Resolution:	Invalid		
Description			
<p>Howdy,</p> <p>tl;dr I propose the Redmine REST API should give a lower WATCHDOG error level on 404 errors, and I can submit the patch if desired.</p> <p>My company has been happily using redmine for a few years now. We have recently started using the redmine_rest_api_module via our Drupal based IRC Chat Bot. I have set up a monitoring system that will notify me if there are any WATCHDOG_CRITICAL errors on our site. These things put together meant that if someone made a typo in our chat room when trying to call up information on a redmine ticket, my monitoring system would send me a message there there were critical errors on my website.</p> <p>The relevant code is redmine_rest_api/redmine_rest_api.module, line 150</p> <pre>if (\$result->code == '404') { watchdog('redmine', t('The URL %url caused a 404 error from the service.', array('%url' => \$url . '.' . \$api_type . '?key=' . \$api_key)), NULL, WATCHDOG_CRITICAL); } elseif (\$result->code == '500') { watchdog('redmine', t('The URL %url caused a 500 internal server error at the service.', array('%url' => \$url . '.' . \$api_type . '?key=' . \$api_key)), NULL, WATCHDOG_CRITICAL); } elseif (\$result->code == '403') { watchdog('redmine', t('The URL %url was denied access with a 403 code by the service.', array('%url' => \$url . '.' . \$api_type . '?key=' . \$api_key)), NULL, WATCHDOG_CRITICAL); }</pre> <p>I propose that the watchdog levels for those lines change to WATCHDOG_WARNING or WATCHDOG_ERROR.</p> <p>Available Drupal watchdog levels: https://api.drupal.org/api/drupal/includes!bootstrap.inc/function/watchdog/7 Drupal severity level guidelines: https://api.drupal.org/api/drupal/includes!bootstrap.inc/group/logging_severity_levels/7</p>

- Status changed from New to Resolved

Oops. Submitted this to the wrong development tracker. This is a drupal issue not a redmine issue. Sorry!
