<b>Resolution:</b>			

**Description**

This operator might have special meaning in textile, but I didn't not find it in the documents. When I input this as plain textile text or as inline code (betwee @ characters), sometimes it disappears.

This is annoying, because = = is the equality operator in many programming languages.

I will paste this text below:

```
@x == y && a == b@
x == y && a == b@

== abc ==

=== abc ===

= abc =

x == y & a == b

x == y

a == b

x == y && a == b@
x == y && a == b@
```

After pasting:

```
x y && a b
x y && a b

abc

=== abc ===

= abc =

x y & a b

x y

a b

x y && a b
x y && a b
```

since still open, if anybody else finds this: also just as annoying, you can circumvent the problem by either leaving out the leading space as in `x== 5` or by inserting a coded space (`&#xa;`) instead: `x == 5 (x&#xa;== 5)`
