Description

This operator might have special meaning in textile, but I didn't not find it in the documents. When I input this as plain textile text or as inline code (betwee @ characters), sometimes it disappears.

This is annoying, because = = is the equality operator in many programming languages.

I will paste this text below:

```
@x == y && a == b@  
@x == y && a == b@
```

```
== abc ==
```

```
=== abc ===
```

```
= abc =
```

```
x == y & a == b
```

```
x == y
```

```
a == b
```

```
@x == y && a == b@  
@x == y && a == b@
```

After pasting:

```
x y && a b  
x y && a b
```

```
abc
```

```
=== abc ===
```

```
= abc =
```

```
x y & a b
```

```
x y
```

```
a b
```

```
x y && a b  
x y && a b
```

History

#1 - 2015-10-16 12:41 - Toshi MARUYAMA

- Category set to Text formatting

#2 - 2023-09-27 18:34 - Simon Fischer

since still open, if anybody else finds this: also just as annoying, you can circumvent the problem by either leaving out the leading space as in `x== 5` or by inserting a coded space (`
`) instead: `x == 5 (x
== 5)`
