#### **Description**

This operator might have special meaning in textile, but I didn't not find it in the documents. When I input this as plain textile text or as inline code (betwee @ characters), sometimes it disappears.

This is annoying, because = = is the equality operator in many programming languages.

I will paste this text below:

```
0x == y && a == b0
0x == y && a == b0
== abc ==
=== abc ===
= abc =
x == y & a == b
х == у
a == b
@x == y && a == b@
@x == y && a == b@
After pasting:
x y && a b
x y && a b
abc
=== abc ===
= abc =
xy&ab
х у
a b
```

#### History

x y && a b x y && a b

since still open, if anybody else finds this: also just as annoying, you can circumvent the problem by either leaving out the leading space as in x==5 or by inserting a coded space (x==5) instead: x==5 (x==5)
