Could reproduce the issue on 3.2.1-stable... I followed exactly the steps as described.

**#7 - 2016-03-18 12:47 - Stephane Evr**

Note that I think this issue is really annoying. This means that the projects will always keep the old activity names, resulting in discrepancies in the time entry activities reports...

#20018 Is a consequence of this issue

The issue still reproduces on 3.4.1.

**#18 - 2021-06-03 14:36 - Sébastien Douheret**

Problem still exists in 4.0.4 - stable.

Any change to have a fix or a workaround ?

What I don't understand, in my case some projects only use the system activities (IOW enumerations with parent\_id = NULL) and other projects use duplicate activities (activities with parent\_id != NULL).

Any explanation about system versus project activities logic in redmine is welcome, it will help me to understand and propose a fix.

Thanks in advance.

- *File diff.patch added*

Let's take the data of #21056#note-15 as an example.

"Administration> Enumerations> Activities (time tracking) New value" will create data like 33.

Then, when you save the settings for each project, data with project\_id such as 41 or 45 will be generated.

I expect the 41 and 45 names to be updated when the 33 name is updated, but that's not really the case.

I have attached a patch that will automatically update 41 and 45 names when 33 name is updated.

Since the bug that the name is not updated has existed for a long time, it is possible that there is a project that has been used for a long time without being renamed.

I thought that it might be a problem if I change it suddenly with this change, so I try not to update the ones whose names are already inconsistent.(name: self.name\_before\_last\_save)
