

Redmine - Defect #21087

Failed to save member(s): User has already been taken

2015-10-27 15:28 - Stephane Evr

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Project settings	Estimated time:	0.00 hour
Target version:		Affected version:	3.1.0
Resolution:	Wont fix		
Description Create a project A, then a subproject A1, and check "Inherit members" on A1. Then go to Users / user_xx / Projects and click "Add". In Project list, select projects A, A1, and any role, then click "Add": The message "Failed to save member(s): User has already been taken" will appear. In my opinion, if "Inherit members" is selected on subproject A1, and we select project A on the modal, then the A1 project checkbox should be disabled, but checked automatically to tell the user there is an inheritance rule.			

History

#1 - 2015-11-25 14:57 - Toshi MARUYAMA

- Category set to Project settings

#2 - 2016-03-18 12:49 - Stephane Evr

Bug seems to have disappeared on 3.2.1-stable. Could not reproduce it.

#3 - 2016-04-17 07:00 - Toshi MARUYAMA

- Status changed from New to Closed

- Resolution set to Wont fix

I can reproduce.

- open dialog of adding member to project
- change project inheritance setting
- try to save on dialog

But it is very rare case.
