

Redmine - Defect #21120

Internal Error when changing Tracker in filter with custom fields

2015-11-01 01:17 - Mike Sweetman

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:		Affected version:	3.1.1
Resolution:	Invalid		
Description I have several Trackers, each with unique custom fields. Redmine throws an error when: 1. I create a filter for a tracker 2. I select certain columns that are unique to that tracker 3. I then change the tracker to one that doesn't have the same columns available that I have previously selected 4. Redmine throws an internal error. I would like it to re-set to default columns or remove the unavailable columns when I change the tracker to one that doesn't have the columns that are displayed.			

History

#1 - 2015-11-01 10:00 - Jean-Philippe Lang

- Status changed from New to Needs feedback

Cannot reproduce. Please read [SubmittingBugs](#) and post your error stack trace.

#2 - 2015-11-01 16:45 - Mike Sweetman

- MySQL 5.5.46-cll
- Ruby 2.2.1
- Rails 4.2.4
- Redmine 3.1.1

I'm using the Extended Fields plugin (which I've extensively modified to make it work with the later versions of Redmine). Since you couldn't reproduce, I guessed that the problem was being caused by that plugin, so I deleted it and it works fine. I'll need to make some more modifications to it.

Sorry! Thanks!

#3 - 2015-11-01 20:38 - Jean-Philippe Lang

- Status changed from Needs feedback to Closed

- Resolution set to Invalid

OK, thanks for feedback.
