

Redmine - Feature #2115

SVN authentication needed for public project

2008-10-31 02:06 - Sander Datema

Status:	New	Start date:	2008-10-31

Target version:			
Resolution:			
Description			
<p>In some cases an administrator wants to track who is downloading from the svn. Using Redmine.pm that is easy, but only when the project is not public.</p> <p>What I need is that users who are not a member of a public project, still need to authenticate when login into svn, meaning they need to register at the redmine project page.</p> <p>So in Redmine.pm it needs to check if a project is public, but still needs svn auth access.</p> <p>I'm not a perl programmer, so I could not change it.</p> <p>Changes needed:</p> <ul style="list-style-type: none">- Redmine.pm should check if project is public, but not open for anonymous access- Redmine project settings need 'no anon access' switch

+1 to the features request. :P

sander you can comment a line of code in redmine.pm to get basically what you want.
Where the redmine check if the project is public, let it ignore the flag.
I hope it helps.

The idea is nice, however omitting that flag makes Redmine.pm wants the user to be a member of the project. And since members won't be that by default, it's still a problem.

Apache option will be ok?
Something like RedminePublicProjectAnonAccess true|false?

#4 - 2008-11-20 15:23 - Sander Datema

Yeah, that might work. Unless you work with a parent SVN path, in case it won't work.

#5 - 2008-12-08 19:35 - Jon Collette

+1 :) Another suggestion for this feature would be to allow public & anon reads and writes to svn and to redmine separately.

Thanks Overmind. Commenting out lines 208 & 209 worked for me.

```
1. $r->set_handlers(PerlAuthenHandler => [\&OK])
2. if is_public_project($project_id, $r);
```
