Description

I'd like to see the number of commits with each issue. With this I could faster see (or estimate) which will be the major issues in a (new) version.

Example: 3.2.0 has a lot of issues. But the one that really has a lot of commits is #19097 (Responsive layout). Obviously this is the most important issue. It would be nice to see this in order to look forward to the new version.

Though the number of commits is just a hint that an issue is a major one.
