

Redmine - Feature #21445

Link to repository file in another project

2015-12-07 16:32 - Hans Ginzel

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Documentation	Estimated time:	0.00 hour
Target version:			
Resolution:	Fixed		
Description See RedmineTextFormattingTextile , "Links to Repository files". Add please links to files in another project for both Textile and Markdown. E.g. source:project:repo_identifier "some file"			

History

- #1 - 2021-02-05 20:43 - Mischa The Evil
- Category changed from Text formatting to Documentation
 - Status changed from New to Closed
 - Resolution set to Fixed

These links of Redmine links are implemented and documented properly currently. I'll close this issue as such. Please re-open if needed.

Hans Ginzel wrote:

[...]
source:project:repo_identifier|"some file"

FWIW: The actual, correct syntax is: project_identifier:source:repo_identifier|"some file".

#2 - 2024-03-05 10:50 - VVD VVD

But how to link on root of the repo?
This is doesn't work:

```
project_identifier:source:repo_identifier
project_identifier:source:repo_identifier|
project_identifier:source:repo_identifier|.
project_identifier:source:repo_identifier|./
project_identifier:source:repo_identifier|..
project_identifier:source:repo_identifier|../
project_identifier:source:repo_identifier|/
project_identifier:source:repo_identifier|/.
project_identifier:source:repo_identifier|./..
project_identifier:source:repo_identifier|/..
project_identifier:source:repo_identifier|existing_dir/..
project_identifier:source:repo_identifier|existing_dir/../../
```

Also can't link on a file or dir containg 2 dots in a row:

```
project_identifier:source:repo_identifier|file..name
```

Also if a file or dir begin with dot.

Half work:

```
project_identifier:source:repo_identifier|//
```
