Category:	Issues	Estimated time:	0.00 hour
Target version:			
Resolution:	Duplicate		
Description			
<p>When mentioning another issue in the description or a comment with hashtag, this could automatically trigger the setting of a relation to this issue. The type of relation could be predefined in the project settings.</p> <p>For example: Someone opens a new issue for reporting a bug. The developer comments something like "That's the same issue like in #1234" With posting his comment, redmine recognizes the hashtag and the issue ID behind it, and sets #1234 as "Related to" in the current issue at the same time posting it.</p>
